Lesson 11: Percentage Contexts

11.1: Leaving a Tip

Which of these expressions represent a 15% tip on a \$20 meal? Which represent the total bill?

$$15 \cdot 20$$

$$20 + 0.15 \cdot 20$$

$$1.15 \cdot 20$$

$$\frac{15}{100} \cdot 20$$

11.2: A Car Dealership

A car dealership pays a wholesale price of \$12,000 to purchase a vehicle.

1. The car dealership wants to make a 32% profit.

a. By how much will they mark up the price of the vehicle?

b. After the markup, what is the retail price of the vehicle?

2. During a special sales event, the dealership offers a 10% discount off of the retail price. After the discount, how much will a customer pay for this vehicle?

Lesson 11 Summary

There are many everyday situations where a percentage of an amount of money is added to or subtracted from that amount, in order to be paid to some other person or organization:

	goes to	how it works
sales tax	the government	added to the price of the item
gratuity (tip)	the server	added to the cost of the meal
interest	the lender (or account holder)	added to the balance of the loan, credit card, or bank account
markup	the seller	added to the price of an item so the seller can make a profit
markdown (discount)	the customer	subtracted from the price of an item to encourage the customer to buy it
commission	the salesperson	subtracted from the payment that is collected

For example,

- If a restaurant bill is \$34 and the customer pays \$40, they left \$6 dollars as a tip for the server. That is 18% of \$34, so they left an 18% tip. From the customer's perspective, we can think of this as an 18% increase of the restaurant bill.
- If a realtor helps a family sell their home for \$200,000 and earns a 3% commission, then the realtor makes \$6,000, because $(0.03) \cdot 200,000 = 6,000$, and the family gets \$194,000, because $200,000 - 6,000 = 194,000$. From the family's perspective, we can think of this as a 3% decrease on the sale price of the home.
